Visiting Public Buildings

Established by President Truman in 1949, one of the primary roles of the U.S. General Services Administration is the management and care of federally owned and leased buildings throughout the United States. Totating over 9,600 properties, GSA is responsible for implementing innovative solutions in sustainability and green building as well as managing the ever-growing inventory of historic buildings. Organized into 11 geographic regions, GSA's inventory spans the breadth of our nation's history, representing dozens of architectural styles and playing host to numerous historic events. Use the map below to learn more about the history and architecture of the buildings in each region.

FEATURED BUILDING

Ronald Reagan Building and International Trade Center

Open 24 hours. Photo ID required.

[Web Site](#)

[Map](#)

Completed in 1997, the Ronald Reagan Federal Building and International Trade Center is the second largest government building in the country with 3.1 million square feet of office space on an 11 acre site.

Congress mandated that the building bring together public and private resources for the advancement of international trade and globalization under a single roof. As the first and only federal building designed for both government and private sector use, the Reagan Building provides workspace for government employees, commercial and nonprofit organizations, and the Woodrow Wilson International Center for Scholars, as well as shops and restaurants. The building encourages public accessibility and all are welcome to explore the building's artworks and extraordinary architecture.

[Web Site](#)

[Map](#)

Completed in 1934, the Ariel Rios federal building was originally known as the New Post Office Building. Replacing the Old Post Office, located across 12th Street, the new building was intended to consolidate and house the quickly expanding Post Office Department. The vast curved facades and hour-glass shape of Ariel Rios serve as a monument to the original design of the Federal Triangle, which included two large circular plazas to either side of the building. Today the building operates as the headquarters of the U.S. Environmental Protection Agency.
